

INO Vibration Control Opti

Control your machines with INO SMART device!

NEW ON THE MARKET:

NO MORE DAMAGE DUE TO VIBRATIONS, GET USEFUL INFORMATION, ENSURE SAFE DRIVING!

– Sudden vibrations on attachments can cause serious damage to the machine if not noticed in time. The driver's attention is thus focused on the operation of the implement instead of driving safely.

– INO Vibration control OPTI allows the tractor driver to focus on driving. The sensor on the attached machine monitors the vibrations generated during operation and informs and warns the tractor driver via an application on the phone when the vibrations are too excessive.

– The sensor provides the application with other important data that the tractor driver can view during or after work.

– The sensor has a built-in battery and is connected to the application on the phone via a Bluetooth signal.

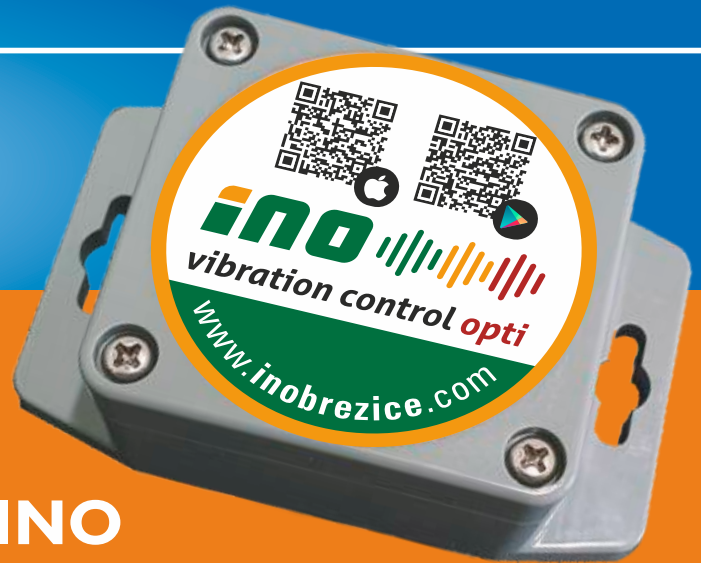

– The battery allows the sensor to operate for up to 500 operating hours. During idle, the sensor is also idle. The operation of the sensor activates the movement of the attached machine, the signal on the application is accessible again. The application also shows us the battery status to replace the battery in time.

INO Vibration Control OPTI is calibrated for INO products and displays the measured values tested and confirmed in an authorized institution.
