

NEW PRODUCT:

**GENTLEcut electro control
on ROTARY SIDE DISC BD**

For fast, precise and gentle cutting among plants, recommended in young orchards, in berry orchards and where there is a small distance between plants

Electro control on rotary side disc BD	GENTLEcut
GENTLEcut electro control →	replaces classic hydraulic control of BD movement

GENTLEcut – advantages:	
→	- gentle encirclement of the plant
→	- uniform running of BD
→	- easy to operate
→	- can be adjusted according to the sensitivity of plants
→	- faster initiation of appropriate movement
→	- additional operations

GENTLEcut – how it works:	
GENTLEcut control panel with cables and sensors →	is connected with mechanic sensor and with electronic valve to control hydraulic cylinder
Already a gentle move of the mechanic sensor →	activates electronic sensors
Control panel gets a signal from sensors →	and activates hydraulic cylinder
Double acting hydraulic cylinder →	moves the side disc BD around the plant
Mechanic sensor is height adjusted →	for more precise work regarding the terrain and regarding the type of plants

GENTLEcut kit – what does it include:	
Main parts: control panel with sensors, e.m.valve, hydr.pipes, mechanic sensor, spring, sensor holder →	Can be installed on BD with classic hydraulic control. It can be replaced also subsequently

GENTLEcut - additional operations:	
single click on remote control →	- move extreme in - into transport position
double click on remote control →	- auto mode
longer press on remote control →	- manually move backwards
4 x click on remote control →	- move extreme out -useful as increased working width when mulching in open fields
